

## Integrate 201 Online – Intermediate Level

### Intermediate Technology Integration for Teachers

Utilizing the latest in web technologies, the Integrate 201 series takes technology training to the next level. Incorporating multimedia, narration, visual demonstrations, and interactive hands-on projects, teachers acquire the ability to work with mail merge in word processing, more advanced features for configuring databases and spreadsheets, and the more powerful linking aspects of presentation graphics. They then develop a lesson plan and/or thematic unit incorporating technology with integrated curriculum in more dynamic ways to support classroom learning.

The Integrate 201 Online series includes five courses that can be taken as individual modules. Teachers learn by engaging in real interaction; by practicing actual software concepts and skills, not simply viewing movement or text on screen. Each course includes a pre- and post-assessment that creates a custom learning path for each participant. Courses are self-paced - teachers learn at their own pace and in their own style, and progress reports can be instantly generated online. Teachers can print out curriculum integration ideas and lesson plans to use in their classroom immediately. Teachers can take Integrate 201 Online anytime, anywhere, with no lost classroom time.

#### Assessments Included:

- Integrate Diagnostic Assessment
- Integrate Post-Assessment
- Portfolio Assessment

Delivery Mode	Platform	Software	Length
Web	PC	Office 97/2000	35-45 online hours
Bridge	PC	Office 97/2000	2 Instructor-led sessions +35-45 online hours
